

Low carbon heating system

Detached Bungalow in County Limerick.

Low carbon heating system

At initial planning stages the heating system for this project was a dilemma. Ashgrove's installers in the area, Mike & Conor O' Brien, came highly recommended to the client. He also considered an oil boiler with solar panels. The expense of filling the oil tank and also the idea of covering the roof with solar panels turned him off the idea. The possible theft of

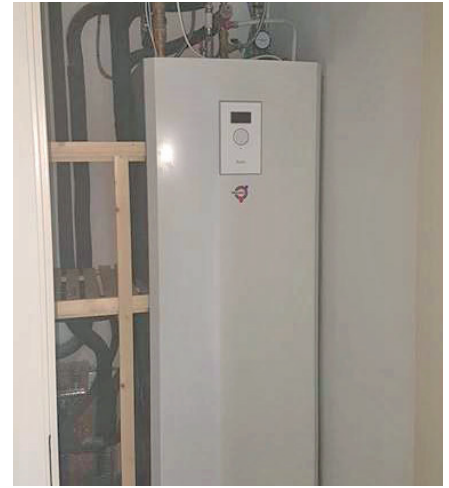

oil was also a factor. Part L regulations were also a big factor in the decision. The clients found the ease of compliance with a Thermia heat pump extremely reassuring. He received other quotes for heat pumps but Ashgrove's quotation was the most competitive. Mike & Conor were very helpful with the decision also and were very informative and inspired great confidence in the Thermia system.

Kitchen

Thermia iTec 9 kW air source heat pump

Thermia iTec Total a 180 litre domestic hot water cylinder

"I'm very happy with the system. The consistent heat is great and the house is so comfortable I am delighted. I am starting another build in the near future and we will certainly be back to O'Brien Brothers and Ashgrove. Mike has been very helpful and is always contactable. It has been hassle free." – says Noel Costello

Investment that pays off

The running costs are low and the heat pump looks like a great fit for this home. The cost of the complete system; Air to Water heat pump, underfloor and all

controls, including the pressurized domestic plumbing system was €17,000. After Thermia Atec installation total heating cost is 605 Euro per year.

Ashgrove's team of experts specified, designed and sized the heat pump using Thermia Heat Pump Calculator software.

The unit was installed by Mike & Conor O'Brien of O'Brien Brothers Heating & Plumbing, one of Ashgrove's preferred installers throughout Ireland.

THERMIA THE ULTIMATE ENERGY PROVIDER SINCE 1923

Pioneering heat pumps

For the last 50 years, we have dedicated all our resources and knowledge to developing and endlessly refining one product: the heat pump. Our focus on geothermal energy has given us world-leading knowledge in heat pump technology.

Engineered with passion

Developing truly sustainable renewable energy solutions can only be achieved with passionate, dedicated and uncompromising experts. Some of Europe's most highly qualified engineers can be found in our own R&D center.

Born in Sweden

All our products are designed, manufactured and tested in Sweden using the latest technology and the highest quality components. We are proud to count world-leading industry specialist, Danfoss, among our technology partners.
